Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 20 June 2005.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.

DETAILED ACTION

1. This action is responsive to communications: RCE filed 6/20/05.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cane et al, US# 2001/0034737 A1, in view of Barney et al., US# 2004/0220899 A1, and further in view of Nomoto, US# 20010028363 A1.

As per claim 1, Cane et al. teaches "a plural saving designating unit . . . saving destinations in a single original file should be saved" (see page 2, paragraphs [0031]-[0033]) "a file saving unit separately saving and managing the single original file and copies of the single original file . . ." (see page 2, paragraphs [0029] and [0031]). Cane et al. does not teach "in response to a request from a user to save multiple copies of the single original file . . .". Barney et al. teaches "in response to a request from a user to save multiple copies of the single original file . . ." (see paragraphs [0048], [0054], and [0091]). It would have been obvious at the time of the invention for one of ordinary skill in the art to have combined the teachings of Cane and Barney, because using the steps of "in response to a request from a user to save multiple copies of the single original file . . .", would have given those skilled in the art the tools to save multiple

copies of an original file in various folder/folders. This gives users the advantage of processing saved original files more efficiently. Cane et al. does not explicitly "teach with a completed original file saved in both the working directory and the public directory to publicize only the completed original file." Nomoto et al. teaches "teach with a completed original file saved in both the working directory and the public directory to publicize only the completed original file" (see paragraph [0014], [0077], and [0091]). It would have been obvious at the time of the invention for one of ordinary skill in the art to have combined Cane and Nomoto, because using the steps of copying complete versions of documents in various locations while maintaining various versions of the document's content. This gives users that advantage of having version copy of specified documents in various locations.

As per claims 2-3, Cane et al. teaches "designates a plurality of saving destinations" (see pages 3-4, paragraph [0041]-[0042]).

As per claim 4, Cane et al. teaches "designation of a term for which said file has been prepared" (see page 3, paragraph [0034]).

As per claims 5-6, Cane et al. teaches "designation of a size of said file . . ." (see page 6, paragraph [0061], whereas Cane's server is equivalent to applicant's "implementor").

As per claim 7, Cane et al. teaches "at least one file unconditionally" (see page 2, paragraph [0029]).

Art Unit: 2163

As per claim 8, Cane et al. teaches "a link information storing unit . . ." (see fig. 1—sheet 1 of 12, whereas Cane's "second memory device", "first memory device", etc. are equivalent to applicant's use of the phrase "link information storing unit").

As per claim 9, this claim is rejected on ground corresponding to the arguments given above for rejected claim 1 and is similarly rejected including the following:

--Cane et al. teaches "saving multiple copies of the file at the plurality of saving destinations thus designated" (see page 2, paragraph [0030]-[0031], whereas Cane's mirroring system is equivalent to applicant's multiple copies element and therefore the teachings are synonymous).

As per claim 10, this claim is rejected on grounds corresponding to the arguments given above for rejected claims 1 and 9 and are similarly rejected.

Response to Arguments

4. Applicant's arguments with respect to claims 1-10 have been considered but are moot in view of the new ground(s) of rejection.
